Applicant: Andrew Harvey Barr, et al.

Serial No.: 10/621,661 Filed: July 17, 2003 Docket No.: 200308575-1

Title: PARTIALLY VOIDED ANTI-PADS

## IN THE CLAIMS

Please amend claims 35 and 36 as follows:

1. (Previously presented) A printed circuit board comprising:

a conductive layer;

a via transecting the conductive layer; and

an anti-pad around the via, the anti-pad comprising a pattern of conductive material having a plurality of voids,

wherein the pattern of conductive material is electrically isolated.

- 2. (Original) The printed circuit board of claim 1, wherein the pattern of conductive material is configured to maintain planarity of the printed circuit board.
- 3. (Original) The printed circuit board of claim 1, wherein the pattern of conductive material is configured to prevent settling of dielectric material in the printed circuit board near the via.
- 4. (Original) The printed circuit board of claim 1, wherein the via is configured for data transfer rates greater than approximately 2 GHz.
- 5. (Original) The printed circuit board of claim 1, wherein the pattern of conductive material is configured for data transfer rates through the via greater than approximately 2 GHz.
- 6. (Original) The printed circuit board of claim 1, wherein the pattern of conductive material is substantially circular in shape.
- 7-8. (Cancelled)

Title: PARTIALLY VOIDED ANTI-PADS

- 9. (Original) The printed circuit board of claim 1, wherein the conductive layer comprises a power plane.
- 10. (Original) The printed circuit board of claim 1, wherein the conductive layer comprises a ground plane.
- 11. (Original) The printed circuit board of claim 1, wherein the pattern comprises a symmetric pattern.
- 12. (Original) The printed circuit board of claim 1, wherein the pattern comprises an asymmetric pattern.
- 13. (Original) The printed circuit board of claim 1, wherein the pattern comprises a concentric circles pattern.
- 14. (Original) The printed circuit board of claim 1, wherein the pattern comprises a radial spokes pattern.
- 15. (Original) The printed circuit board of claim 1, wherein the pattern comprises an arbitrary pattern.
- 16. (Original) The printed circuit board of claim 1, wherein the pattern comprises a screen pattern.
- 17. (Previously presented) A printed circuit board comprising:
  - a conductive plane;
  - a via signal barrel transecting the conductive plane; and
- an anti-pad between the conductive plane and the via signal barrel, the anti-pad having a pattern of conductive material, wherein a signal can not be transmitted between the conductive plane and the via signal barrel, and

wherein the pattern of conductive material is electrically isolated.

Applicant: Andrew Harvey Barr, et al.

Serial No.: 10/621,661 Filed: July 17, 2003 Docket No.: 200308575-1

Title: PARTIALLY VOIDED ANTI-PADS

- 18. (Original) The printed circuit board of claim 17, wherein the pattern of conductive material includes a plurality of voids.
- 19. (Original) The printed circuit board of claim 17, wherein the anti-pad is configured to maintain planarity of the printed circuit board.
- 20. (Original) The printed circuit board of claim 17, wherein the anti-pad is configured to minimize stray capacitance between the via and the conductive plane.
- 21. (Original) The printed circuit board of claim 17, wherein the anti-pad is configured to prevent settling of dielectric material in the printed circuit board adjacent the via signal barrel.
- 22. (Original) The printed circuit board of claim 17, wherein the conductive plane comprises one of a power plane and a ground plane.
- 23. (Original) The printed circuit board of claim 17, wherein the conductive plane comprises copper.
- 24. (Previously presented) A method for forming a printed circuit board, comprising: forming a conductive plane; forming a via signal barrel transecting the conductive plane; and forming a partially voided anti-pad between the conductive plane and the via signal barrel,

wherein the partially voided anti-pad is electrically isolated.

25. (Original) The method of claim 24, wherein the conductive plane comprises one of a power plane and a ground plane.

Applicant: Andrew Harvey Barr, et al.

Serial No.: 10/621,661 Filed: July 17, 2003 Docket No.: 200308575-1

Title: PARTIALLY VOIDED ANTI-PADS

- 26. (Original) The method of claim 24, wherein the partially voided anti-pad is formed to maintain the planarity of the printed circuit board.
- 27. (Original) The method of claim 24, wherein the partially voided anti-pad is formed to minimize stray capacitance between the via and the conductive plane.
- 28. (Original) The method of claim 24, wherein the partially voided anti-pad is formed by removing conductive material from the conductive plane in a pattern.
- 29. (Original) The method of claim 28, wherein removing conductive material is performed by using an etching process.
- 30. (Original) The method of claim 28, wherein the pattern comprises one of a symmetric pattern and an asymmetric pattern.
- 31. (Original) The method of claim 28, wherein the pattern comprises a screen pattern.
- 32. (Original) The method of claim 28, wherein the pattern comprises one of an arbitrary pattern and a random pattern.
- 33. (Original) The method of claim 24, wherein the anti-pad is substantially circular in shape.
- 34. (Original) The method of claim 24, wherein the via signal barrel is substantially circular in shape.
- 35. (Currently Amended) A printed circuit board comprising:
  - a conductive layer;
  - a via transecting the conductive layer; and

Applicant: Andrew Harvey Barr, et al.

Serial No.: 10/621,661 Filed: July 17, 2003 Docket No.: 200308575-1

Title: PARTIALLY VOIDED ANTI-PADS

an anti-pad around the via, the anti-pad comprising a pattern of conductive material having a plurality of voids, the pattern of conductive material isolated from the conductive layer,

wherein the pattern comprises an asymmetric pattern.

- 36. (Currently Amended) A printed circuit board comprising:
  - a conductive layer;
  - a via transecting the conductive layer; and
- an anti-pad around the via, the anti-pad comprising a pattern of conductive material having a plurality of voids, the pattern of conductive material isolated from the conductive layer,

wherein the pattern comprises a concentric circles pattern.

- 37. (Previously presented) A printed circuit board comprising:
  - a conductive layer;
  - a via transecting the conductive layer; and
- an anti-pad around the via, the anti-pad comprising a pattern of conductive material having a plurality of voids,

wherein the pattern comprises a screen pattern.
